

GoVote NYC Data Dashboard

Welcome to Hester Street's GoVote Data Dashboard! This tool is meant to help organizations working on Getting Out the Vote in NYC, by providing an easy to analyze voting and demographic data for your neighborhood, zipcode, community district or election district.

- You have 2 options to use this tool:
1. You can use the "Choose by Location" tab to see all the data for your geography. This will help you figure out the basic demographics and electoral data of your focus area to tailor your outreach.
 2. You can use the "Rank by Geography" to identify how different neighborhoods, zipcodes, community districts, or election districts rank according to different parameters, like electoral participation, percent of a certain population, or other demographic data. This will help you figure out different areas of the city to focus your impact if you are working across the city.

Rank by
Geography

Choose your location

1. Define what type of geography you want your information in: zipcodes, neighborhoods, community district, election district, congressional district. You can only choose one at a time (e.g. You can select 2 or more zipcodes, but cannot select zipcodes and community districts together)
2. Use the filter below to select the area that you want to see information for. You can select just one area or several (e.g. you can look at zipcode 11225 on its own, or group it with adjacent zipcodes like 11226 and 11203 to view the information for a larger focus area)
3. If you want to switch which geography you are looking at, make sure to change the filter back to "All" before looking at other types of geography.

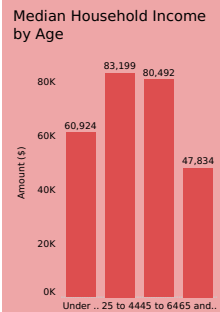

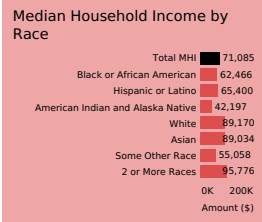

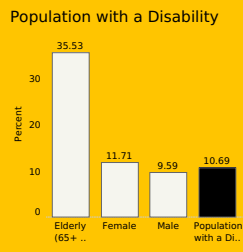

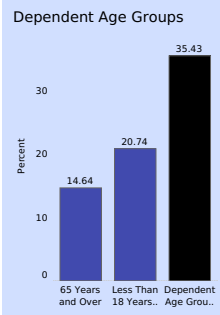

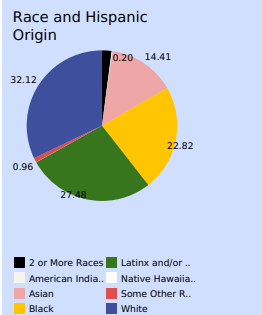

Zipcode All	Neighborhoods All	Council Districts All	Assembly District All
Senate District All	Congressional District All	School District All	Community Districts All

Your Focus Area

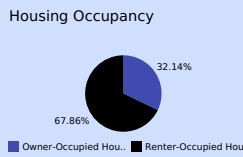

Take a look at the graphs below to learn more about the demographics and electoral data for the focus area you chose.

Average Participation Score

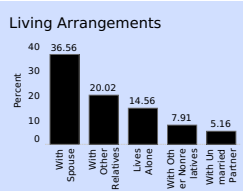

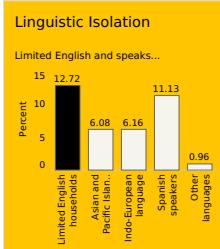

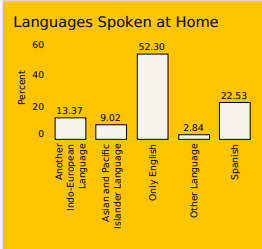

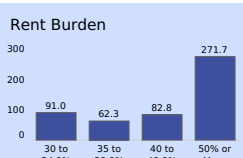

27.68 %

No Internet Access
15.66%

Foreign Born Population
37.31%
